⑤4 Data synchronizing buffer.

57) Synchronizing buffer which synchronizes data link data with the channel clock (24) such that one character is transmitted onto the data link (18) for each channel clock. The synchronising buffer disclosed includes a first-in-first-out (FIFO) buffer which receives data characters from a data channel buffer, and outputs them onto the data link (18). When the

channel clock (24) is stopped, the synchronizing buffer circuit places idle characters on the data link with the proper disparity. When the channel clock (24) restarts, the circuit synchronises the sending of restarted data characters with the idle characters placed onto the link such that there is an intelligible string of characters on the data link at all times.
